

Solder Bridges are for Grounding

The Lundahl secondary designations for ground and shield, are here given for the LL1570, as an example, but can have different designations with other transformers. This is difficult and confusing.

For this reason, we called the ground links A, B, C, 8, so we have unique designations on the PCB, and no confusion with that.

For suggested use, check the JACMUSIC website, under:
Parts => Lundahl => PCBs for small signal => EE08
