With LUNDAHL, all PLATE chokes can be used as POWER SUPPLY chokes and vice versa. Though Power Supply chokes are specified @ ~RMS, and subject to ~100Hz or ~120Hz ripple, they are made with audiophile cores, and full audio range always.

Chokes with high inductance have many windings, and so higher DC resistance. This protects the rectifiers and capacitors. Though you do have some voltage loss across the DC resistance, this resistance limits the current, when the choke is saturated at cold start, due to empty capacitors. In case you do not want the power loss, lower resistance types exist too. For convenient selection, we have put them all here in one table, first sorted by DC Current, then by Henry.

Lieber Kunde, wir dürfen die von Yamamoto fertig aufgebaute Elektro-Geräte nicht nach Deutschland liefern, oder sonstige Länder wofür das Deutsche Elektro- und Elektronikgerätegesetz Gültigkeit hat. Die Grünen wollten damit sicherstellen, dass Endverbraucher Ihre Yamamoto Verstärker kostenlos verschrotten lassen können, wofür wir noch diese Kosten auf Jahrzehnte im Voraus entrichten müssten. Den Unsinn machen wir nicht mit. Wir bitten um Ihr Verständnis, dass wir nur Yamamoto Bausätze und Bauteile liefern. Bedanken Sie sich hier: www.gruene.de
